Climbing Stairs

$n = 6$

Can step up 1 or 2 steps until top

$n = 6$

Can step up 1 or 2 steps until top

Brute force: list all possible combinations of 1 and 2 steps that add up to  $n$

[1,1,1,1,1,1]

[2,1,1,1,1]

[1,2,1,1,1]

$n = 6$

Can step up 1 or 2 steps until top

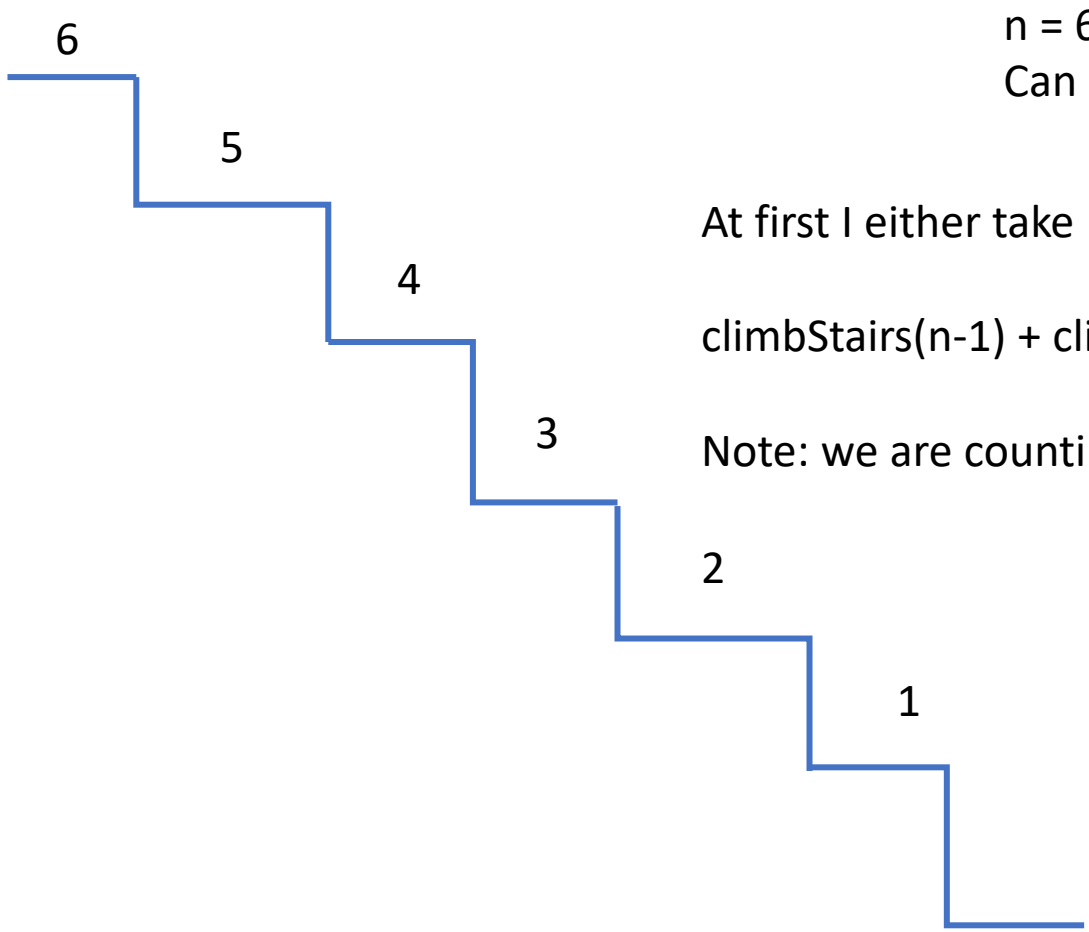

Brute force: list all possible combinations of 1 and 2 steps that add up to  $n$

[1,1,1,1,1,1]

[2,1,1,1,1]

[1,2,1,1,1]

Can we define an optimal solution from optimal solution to subproblems?

$n = 6$

Can step up 1 or 2 steps until top

At first I either take 1 or 2 steps, then solve the remaining problem:

$\text{climbStairs}(n-1) + \text{climbStairs}(n-2)$

Note: we are counting how many ways, not how many steps!

Can we define an optimal solution from optimal solution to subproblems?

$n = 6$

Can step up 1 or 2 steps until top

At first I either take 1 or 2 steps, then solve the remaining problem:

$\text{climbStairs}(n-1) + \text{climbStairs}(n-2)$

Note: we are counting how many ways, not how many steps!

```
if(n <= 2) return n
else return climbStairs(n-1) + climbStairs(n-2)
```

Can we define an optimal solution from optimal solution to subproblems?

$n = 6$

Can step up 1 or 2 steps until top
